

OpenADR: EV Interest Group

Managed EV charging companies are the fastest growing component of Alliance membership

The OpenADR Alliance has grown to over 160 member companies globally and certified more than 200 products based on the OpenADR standard. These products have automated and simplified applications for DR and DER markets, from renewable energy to demand side resources and, most recently, electric vehicle charging. In fact, managed EV charging companies are the fastest growing component of Alliance membership.

This dynamic growth led us to create an EV Interest Group for Alliance members with an interest in this industry. Members share information on topics ranging from utility company programs to EV charging corridors.

SPECIAL OFFER

Interested but not a member of the OpenADR Alliance yet? We would like to invite you our free upcoming webinar scheduled on June 2, 2022. Please contact us at info@openadr.org for more information and visit www.openadr.org.
