

QualityLogic OpenADR Test Tools and QA Services

Time to market is critical and QualityLogic's OpenADR 2.0 tools and services can dramatically accelerate your development efforts. We are the proud official test tool and training partner of the OpenADR Alliance.

Key Benefits

Experience that Matters

- We designed, developed and maintain the OpenADR Test Harness. We know OpenADR.

Industry Leading Training Programs

- We've trained over 100 engineers in seven countries on the key aspects of the OpenADR standard.

Interoperability Experts

- Our state-of-the-art test tools simulate environments to test interoperability of smart grid products. Work with the EXPERTS to get it right!

Overview

In the Smart Energy market, early products set expectations – positive or negative. That's why it's critical to be sure your products comply with relevant standards, work within smart grid systems, and interoperate with other products. QualityLogic's interoperability experts have the expertise to help you understand, create, validate and certify interoperable Smart Energy products.

Solution at a Glance

To assist companies in the development of OpenADR 2.0 compliant products we have developed a number of products and services to help with your OpenADR 2.0 efforts.

OpenADR Certification Test Tool

You can validate your product's conformance to the OpenADR certification requirements during your development process and prior to submitting your device for certification. The OpenADR Test Tool is exactly the same one used by authorized OpenADR Certification Test Labs worldwide.

Each test case in the Certification Test Tools has a defined set of prerequisites, a test scenario consisting of a sequence of VEN/VTN message exchanges, and an expected result.

Execution of a test scenario will result in payload exchanges between the device under test and the Test Harness. Several forms of analysis are performed on this payload exchange. The Test Harness validates and reports:

- Message interaction patterns are as expected, including correct response and request payloads
- Properly formed XML
- Conformance to OpenADR 2.0 schema
- That specific conformance rules defined in the OpenADR Profile Specification are followed
- The intent of the test case is met – pass
- If the test case fails, an error report is created

OpenADR Workshops

QualityLogic offers one or two-day workshops for those developing OpenADR 2.0 products and those specifying or using them.

OpenADR Developer's Workshops

- Provides a conceptual and detailed technical understanding of what OpenADR 2.0 is and how it works. Your team will become familiar with OpenADR 2.0 technology; Certification Profiles a and b; the conformance certification program; and the pre-certification tests and tools. The workshop illustrates how OpenADR can automate typical utility DR programs.

OpenADR Implementer's Workshops

- The focus is on using OpenADR 2.0, covering high-level and detailed views of features and functions, and DR program design and deployment issues.

Fundamentals of OpenADR Online Video Training

This online video training program offers the same content as QualityLogic's Developer's workshop. The online videos provide companies and organizations developing products or programs involving the OpenADR 2.0 specification a flexible way to prepare for development and implementation on their own schedule. A subscription to the program allows participants the ability to access 6 hours of training in 9 videos for a three-month period. The training program begins by discussing DR, the OpenADR standard in general and then moves into a detailed discussion of the technical requirements of the standard. The content for the online training program is the same as the Developer's Workshop.

There are two different courses available – Fundamentals of OpenADR and Fundamentals of OpenADR Plus. The Plus version has the same video material as our Fundamentals of OpenADR course but also comes with the addition of direct instructor support totaling 3 hours by email or webinar for supplemental discussion of specific issues. Visit <https://qualitylogic.thinkific.com/> to learn more.

OpenADR Development Support

Support from our OpenADR experts gives your team access to our in-depth knowledge: they get quick answers to technical questions to keep development projects on track. Implementers get answers to questions that arise about implementation challenges.

Don't lose critical weeks getting up to speed on the technology or the Certification Test Tool. QualityLogic offers combined OpenADR 2.0 Development and Test Tool Support Contracts that easily pay for themselves in saved time for product development and certification.
