Panasonic	1009
QualityLogic	2343
Siemens	2523
Trilliant	MR-3505
Wi-SUN Alliance	2440

# DistribuTECH 2022 Co-Exhibitors

The **OpenADR Alliance** is broadening its outreach in 2022 in response to the accelerating certification of products and growing deployment of OpenADR-based solutions.

The OpenADR Alliance along with co-exhibitors EEBUS, Grid Solutions and QualityLogic, are showcasing this week solutions and developer resources based on the OpenADR standard for renewable energy, energy storage, demand response and electric vehicle charging. Additionally, more than a dozen members will be showcasing smart grid solutions throughout the exhibit floor.

Also, the OpenADR Alliance has expanded its certification program for products based on EcoPort, the new consumer-facing brand name for the CTA 2045 technical standard. Local utilities can now support EcoPort-enabled water heaters and other appliances as part of their local peak-load management or time of use rate programs. Today's smart appliances will now be able to align energy consumption to minimize electric grid costs, as well as the appliance's energy usage with times of variable renewable energy availability. This will result in millions of tons of carbon emissions saved every year.
