

Lets make this shift happen!

Energy transition is how fast, not if => load flexibility is becoming more and more important

ENERGY IS (still) NOT COOL

ENERGY IS (still) NOT COOL

Load consuming devices are becoming more abundant and more capable

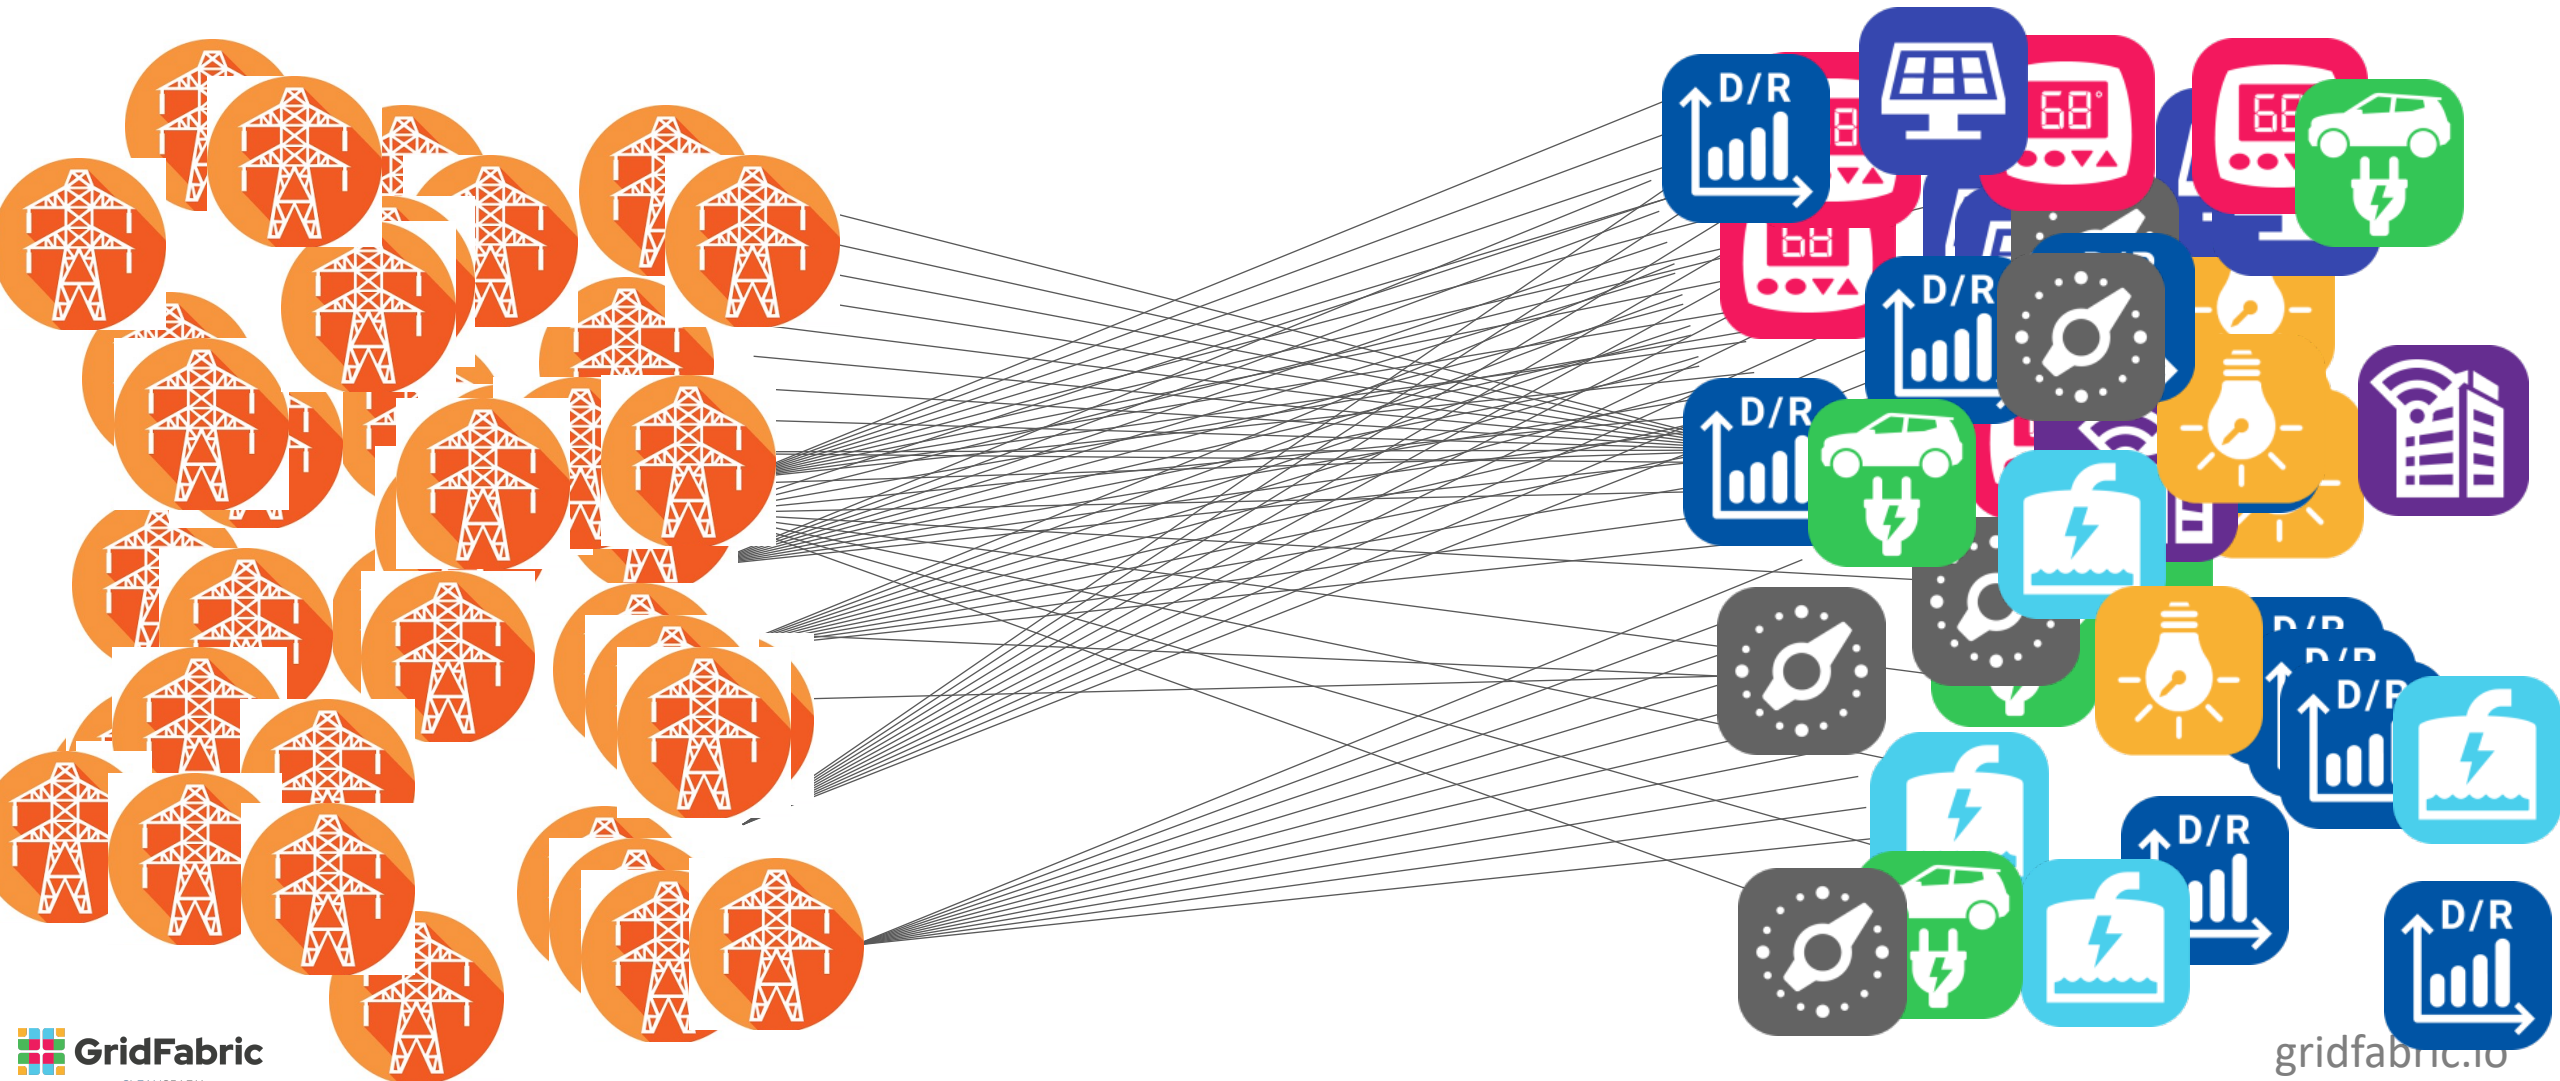

Automation is necessary for load flexibility, therefore so are standards

Automation is necessary for load flexibility, therefore so are standards

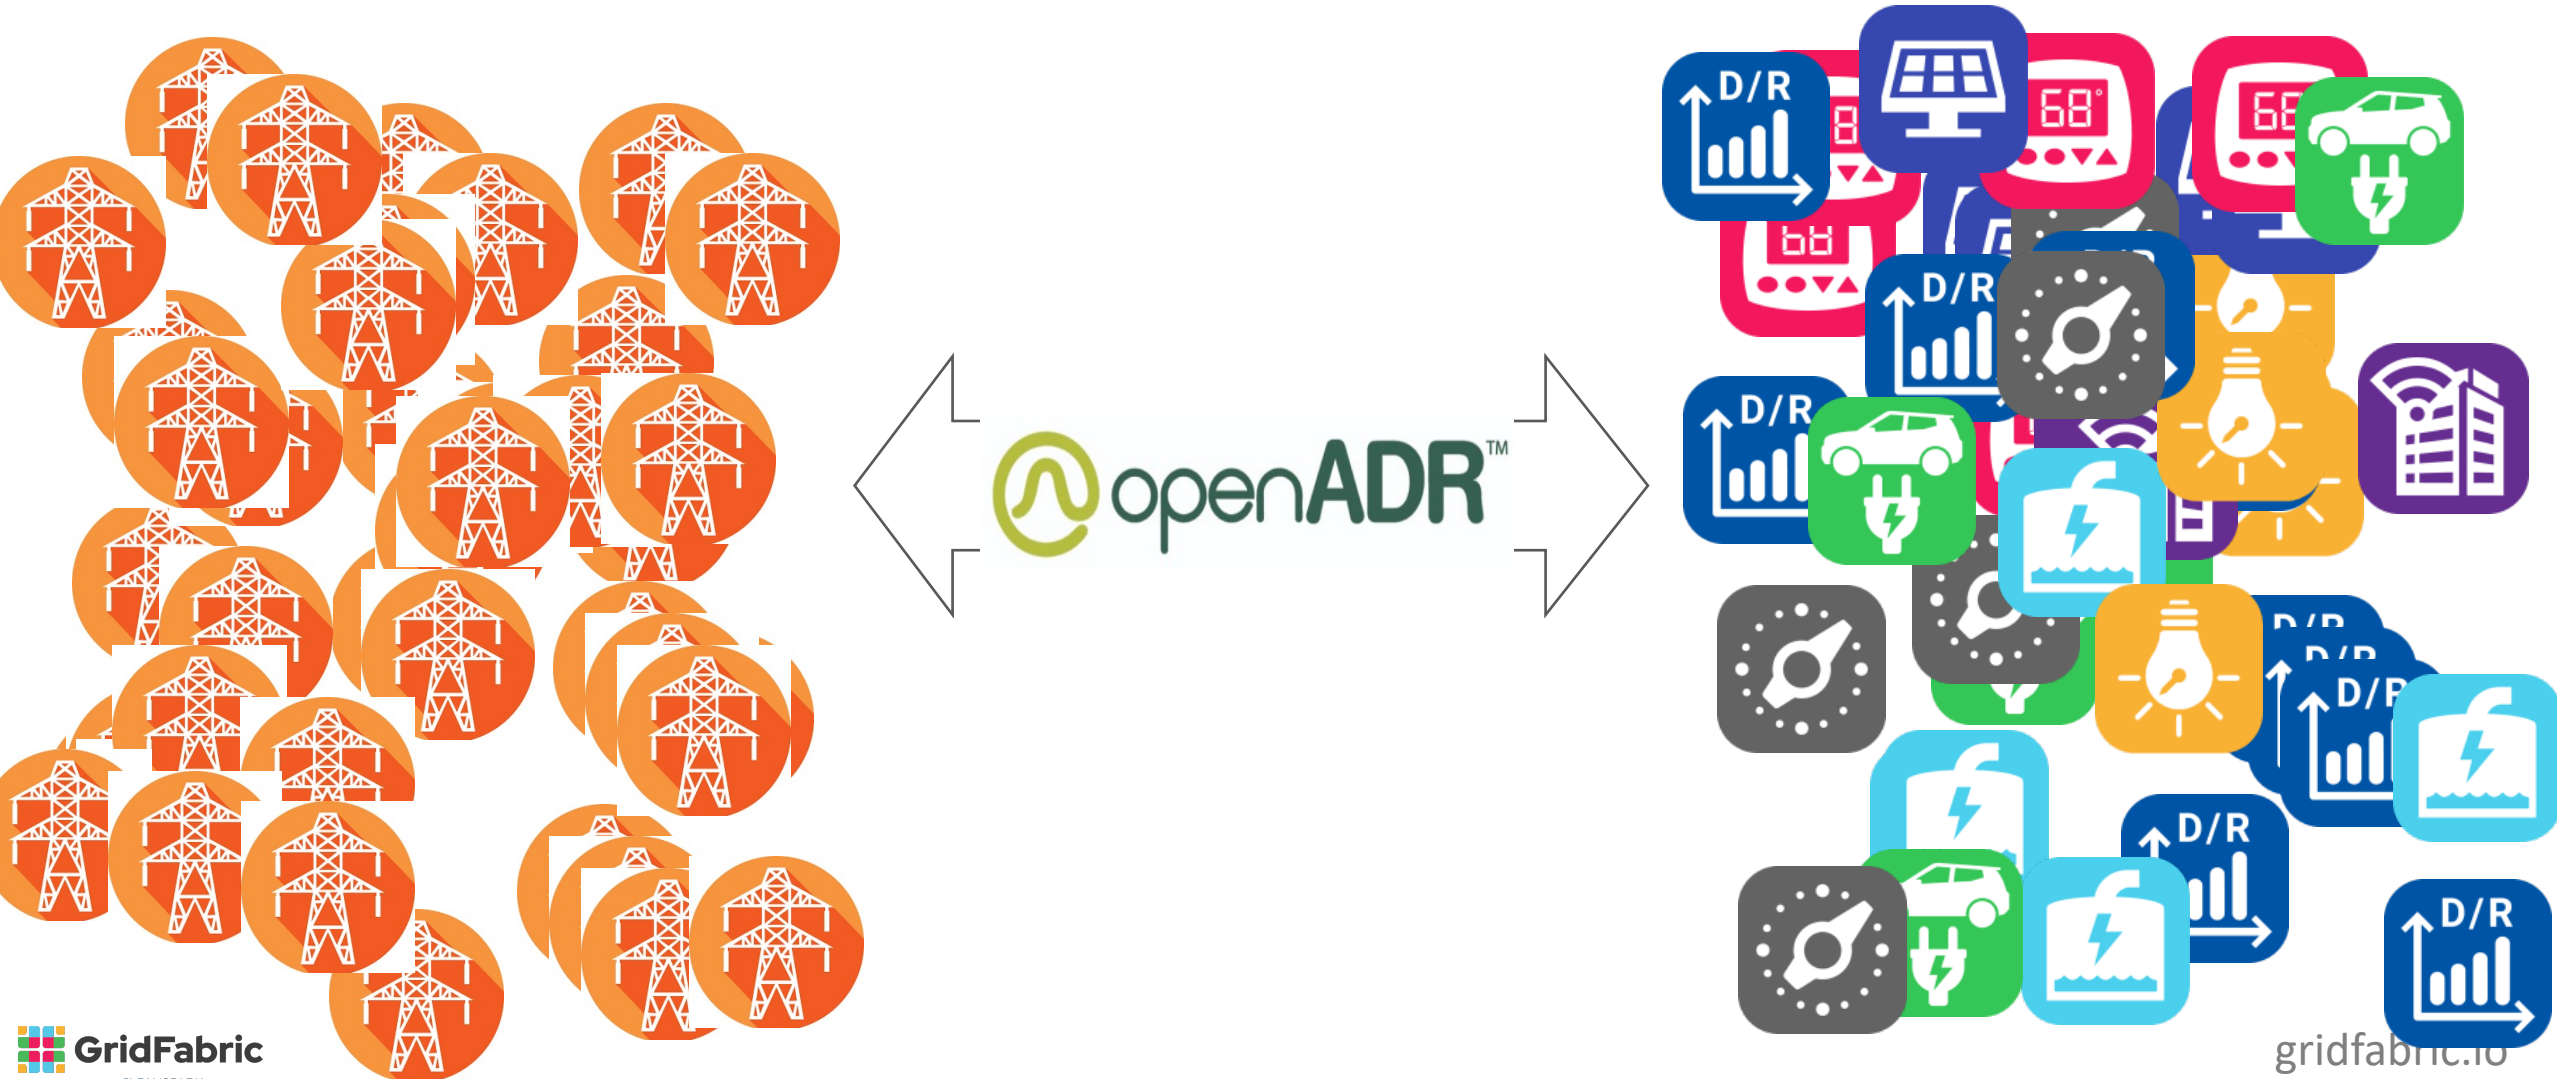

Automation is necessary for load flexibility, therefore so are standards

Automation is necessary for load flexibility, therefore so are standards
